

## LPS® by IKN

### Innovation meets experience.

IKN developed the LPS® to offer a reliable, long-lasting and maintenance-free grate support. This wear-free suspension system consists of stainless steel spring packages and operates without any bearings and lubrication in the confined space of the under grate housing. High precision in the production and assembly process ensures continuous linear movement of the frame and an optimum gap management during its entire service life. It is due to the expertise and experience of IKN Engineers, like Alexander, that our customers can expect 100% reliability .

„PRECISION DURING  
ASSEMBLY OF THE LPS®  
BEFORE DELIVERY IS AN  
INTEGRAL PART OF  
DELIVERING RELIABLE  
AND LONG-LASTING  
PERFORMANCE.“

Alexander, Mechanical Technician  
Final Assembly at IKN
