

The 'Green' challenge, is unending opportunity

LEED Silver Rated Engineering Design and Research Centre, Chennai

LEED Platinum Rated Building in Surat

The ecology and the economy. For us at L&T Construction, they go hand in hand. We engineer sustainability into every aspect of our operations, and identify business opportunities in the challenges posed by climate change and environmental conservation.

By constructing eco-friendly buildings (many of them rated Platinum and Gold by LEED) in L&T's own campuses as well as for a growing client base, we are going green ourselves, and helping others go green too.

We are also addressing the dilemma of finite resources, and infinite needs. Take one of the most vital sectors in

the world today - water. Our broad spectrum of capabilities in water processing, distribution, desalination and re-use have made us the industry leader.

We are helping to find and implement ways to tap the energy of the sun and generate alternative sources that will light up tomorrow's world.

The Team at L&T Construction delivers through the combined expertise of different engineering disciplines that results in the right mix of technology and construction practices for a sustainable future.
